Co-Operative, Birtley

The new Co-Operative Composite Distribution Centre in Birtley covers 25,600 sq metres (276,000 sq ft) and supplies a vast range of products from 3,500 lines to 262 Co-Operative stores in the North of England.

Activity in the centre is extremely busy with hundreds of vehicle movements daily facilitated by 500+ members of staff. We won the contract to supply and install all the safety barriers, balustrades, loading bay barriers and racking protectors inside the warehouse, as well as the vehicle perimeter barriers and ramp barriers externally.

All the products, with the exception of the galvanised spring steel barriers, were painted in high visibility yellow. The spring steel barriers are designed to absorb impacts from HGVs and forklift trucks while retaining their own integrity and ongoing effectiveness. The Co-Op were determined to ensure their new development was as environmentally friendly as possible. Waste oil helps provide heating and the lighting system is solar controlled to eliminate wastage. It ensures a variable level of interior lighting to automatically complement exterior levels.
