Ikea, Sheffield

The store itself opened in the late summer of 2017 after being newly built by Clugston Construction.

This store became IKEA's 20th store in the UK to open due to its increasing popularity. This particular store is the first and only in the UK to have a tram stop nearby, named Carbrook, for shoppers to take advantage of. Should shoppers wish to drive to the store, car park capacity is 983 spaces to accommodate the anticipated volume they expect to receive at the store.

Due to the volume of traffic and the size of the store's car park, we delivered column protection to help protect structural columns, lighting and pipework from vehicle impacts. This cost effective solution can help reduce repairs on a long term basis as structural repairs are expensive. The products we installed were delivered in a galvanised finish meeting BS EN 1461 standards to prevent weathering as well as for aesthetics. As this particular client was expecting high traffic volumes, we recommended preventative methods such as Column Protection Units to minimise damage to structures.

Specification

- Column Mounted Column Protection Units
- Double Height Monostrut CPU
