Porter Building, Slough

The Porter Building houses 110, 625 square feet of office space for companies to utilise.

It is conveniently situated in Slough with excellent transport links to key areas in London and the surrounding cities. The building itself has 100 car parking spaces and 100 bicycle parking spaces for employees and visitors to use. We were tasked with installing edge protection and vehicle restraint systems in the building to ensure both vehicle and pedestrian safety.

The system installed was a perforated aluminium edge protection combined with buffer baseplates and mullion attached. This was designed in house by our design team to combine the two products delivering a compliant system meeting BS EN 1991-1-1 standards. Our team also designed the specialised bridge walkway pedestrian barrier to increase pedestrian safety on site. This particular project demonstrates our ability to design VRS solutions bespoke and being able to accommodate additional client requirements. In all of our projects, we work with our client to ensure that safety is the ultimate priority and the necessary industry standards are met.

Specification

- Perforated Aluminium Edge Protection
- Rubber Column Protection
- Combined Buffer Baseplate with Mullion Attached
- Specialised Bridge Walkway Pedestrian Barrier
- GH Buffers with Berry Beam and Radius Armco Barrier Profile
- Pedestrian handrail and mesh
