SYSTEM 3

Our System 3 is a fully tested, column mounted, safety barrier that uses tensioned rods and infill mesh panels to provide impact resistance to meet the demands of the current BS EN 1991-1-1 standard.

MULTI STOREY CAR PARKS | SURFACE LEVEL CAR PARKS

01

FULLY COMPLIANT

Independently tested to BS6399, also meeting new European Standards BS EN 1991.1.1, which has superseded the British Standard.

02

ADAPTABLE

Incorporating an anti-climb system and design, System 3 provides additional pedestrian protection.

03

FULLY CUSTOMISED

System 3 can be supplied in any RAL colour and can support customer designs, including logos.

DESIGN FLEXIBILITY

FUTURE PROOF INVESTMENT

System 3 can span between columns up to 7.5m. The Berry Flexi Bollards can be implemented within these spans to increase design flexibility and deliver even lower impact deflection levels. Like the Bri-Safe system, there is a wide range of infill panel options to choose from, including wire mesh and screen printed.

BENEFITS OF SYSTEM 3

- COST-EFFECTIVE VRS SOLUTION
- IDEAL FOR NEW BUILD CAR PARKS
- ZERO BAY FOOTPRINT REQUIRES NO ANCHORAGE INTO THE CAR PARK
- DECK CUSTOMISABLE OPTIONS AVAILABLE
- INTERNAL SUPPORTS ADDED FOR LIMITED DEFLECTION
